EXERCISE 11 - Spinning

AIM To recognise the symptoms of a full and an incipient spin and to recover correctly.

AIRMANSHIP LOOKOUT - HASELL - P.O.H. - CAN IT SPIN? - HOW TO RECOVER - ORIENTATION

EXERCISE ALTITUDE 5000' **HASELL**

ENTRY	DURING	RECOVERY

POWER - 1500RPM - CARB HEAT HOT
ATTITUDE - MAINTAIN LEVEL FLIGHT
 	
AS SPEED REDUCES <55kt:
• SIMULTANEOUSLY AND SMOOTHLY:
  • APPLY FULL LEFT RUDDER
  • APPLY FULL AFT ELEVATOR
• KEEP AILERONS CENTRAL
	• MAINTAIN CONTROL INPUT
	
	NOTE:
	• LOW IAS
	• HIGH RoD
	• ROTATION
	• YAW
		• CLOSE THROTTLE
		• APPLY FULL OPPOSITE RUDDER TO ROTATION
		• CONTROL COLUMN FORWARD UNTIL ROTATION STOPS
		• CENTRALISE ALL CONTROLS
		• EASE OUT OF DIVE (WINGS LEVEL)
		• REGAIN HEIGHT WITH POWER

INCIPIENT SPIN RECOVERY **HASELL**

ENTRY	RECOVERY 1	RECOVERY 2
CRUISE POWER - CLIMBING, 20° TURN - UNBALANCED TO THE RIGHT • SMOOTHLY APPLY MORE BACK PRESSURE UNTIL STALL / WINGDROP	• IMMEDIATE OPPOSITE RUDDER TO WING DROP TO PREVENT FURTHER YAW • SIMULTANEOUSLY APPLY: • SSR • LEVEL WINGS • REGAIN HEIGHT • NOTE HEIGHT LOSS	IF AIRCRAFT NOSE DROPS WELL BELOW THE HORIZON, WITH EXCESSIVE WING DROP, • CLOSE THE THROTTLE • CENTRALISE THE CONTROLS • ROLL WINGS LEVEL • EASE OUT OF DIVE • NOSE ABOVE THE HORIZON AS SPEED REDUCES <80KTS APPLY FULL POWER AND CLIMB AWAY • NOTE HEIGHT LOSS

A SPIN MAY BE DESCRIBED AS: AN AGGRAVATED STALL RESULTING IN AUTOROTATION

NOTE: TAKE A SICK BAG WITH YOU!
